1. Sort a given set of elements using the Quicksort method and determine the time required to sort the elements. Repeat the experiment for different values of n , the number of elements in the list to be sorted and plot a graph of the time taken versus n . The elements can be read from a file or can be generated using the random number generator.

```
# include <stdio.h>
# include <conio.h>
# include <time.h>

void Exch(int *p, int *q)
{
    int temp = *p;
    *p = *q;
    *q = temp;
}

void QuickSort(int a[], int low, int high)
{
    int i, j, key, k;
    if(low >= high)
        return;
    key = low; i = low + 1; j = high;
    while(i <= j)
    {
        while ( a[i] <= a[key] ) i = i + 1;
        while ( a[j] > a[key] ) j = j - 1;
        if(i < j) Exch(&a[i], &a[j]);
    }
    Exch(&a[j], &a[key]);
    QuickSort(a, low, j - 1);
    QuickSort(a, j + 1, high);
}

void main()
{
    int n, a[1000], k;
```

```

clrscr();
printf("\n Enter How many Numbers: ");
scanf("%d", &n);
printf("\nThe Random Numbers are:\n");
for(k=1; k<=n; k++)
